

NUCLEAR THE WAY TO GO!!!.

Its clear to many of us that look at future energy plans that the only viable solution with or without the issue of CO2 is to move to nuclear as quickly as possible.

It offers the highest energy density and if we put as much of our capital into that technology that we are wasting on renewables we will have nuclear solutions that can be built and deployed in far less time and cost and will provide affordable abundant and reliable clean energy.

I attach my reading list on the subject..
